

In the Claims

1. **(Original)** A method for defining a composite web page, comprising:
 identifying a web page;
 analyzing the web page to determine a list of the associated elements;
 presenting the list to a user;
 receiving a user selection of one or more associated elements from the list; and
 registering the user selection.

2. **(Original)** The method of claim 1, wherein registering includes storing the user selection in a local registry.

3. **(Original)** The method of claim 1, wherein registering includes transmitting the user selection to a remote server for storage.

4. **(Original)** The method of claim 1, further comprising creating a specification, the specification including data defining how to fetch at least one web page associated with the selected elements and how to extract the selected elements.

5. **(Original)** The method of claim 1, wherein identifying the web page includes identifying a plurality of web pages; and wherein the list includes elements associated with each of the plurality of web pages.

6. **(Original)** The method of 5, further including defining segments of the list according to each of the plurality of web pages.

7. **(Original)** The method of claim 6 where presenting includes presenting each of the segments of the list at separate times.

8. **(Original)** The method of claim 1, further comprising determining an identifier associated with the user and wherein registering includes storing the identifier.

9. **(Currently Amended)** A method for presenting a composite web page, comprising:

receiving a user request to present a composite web page, the composite web page defined by analyzing a web page to determine a list of the associated elements, presenting the list to a user, and receiving a user selection of one or more associated elements from the list;

identifying at least one element of the composite web page;

retrieving the at least one element; and

rendering the at least one element to form the composite web page.

10. **(Original)** The method of claim 9, wherein identifying includes accessing a registry.

11. **(Original)** The method of claim 10, wherein identifying includes:
determining an identifier associated with the user; and
accessing the registry is based on the identifier.

12. **(Original)** The method of claim 9, wherein retrieving includes:
retrieving a web page associated with an element; and
extracting the element from the associated web page.

13. **(Original)** The method of claim 9, wherein identifying includes:
accessing a registry, the registry including data defining the position of each element;
and
wherein rendering includes displaying each element according to the data.

14. **(Original)** A system for defining a composite web page, comprising:

- a processor;
- a memory coupled to the processor storing processor executable instructions to control the operation of the processor;
- the processor executable instructions including:
 - instructions to identify a web page, the web page referencing at least one associated element;
 - instructions to analyze the web page to determine a list of the associated elements;
 - instructions to present the list to a user;
 - instructions to receive a user selection of one or more associated elements from the list, the selected elements for display on a composite web page; and
 - instructions to register the user selection.

15. **(Currently Amended)** A system for presenting a composite web page, comprising:

- a processor;
- a memory coupled to the processor storing processor executable instructions to control the operation of the processor;
- the processor executable instructions including:
 - instructions to receive a user request to present a composite web page, the composite web page defined by analyzing a web page to determine a list of the associated elements, presenting the list to a user, and receiving a user selection of one or more associated elements from the list;
 - instructions to identify at least one element of the composite web page;
 - instructions to retrieve the at least one element; and
 - instructions to render the at least one element to form the composite web page.

16. **(Original)** A computer-readable storage medium encoded with processing instructions for defining a composite web page, including:

computer readable instructions for identifying a web page;

computer readable instructions for analyzing the web page to determine a list of the associated elements;

computer readable instructions for presenting the list to a user;

computer readable instructions for receiving a user selection of one or more associated elements from the list; and

computer readable instructions for registering the user selection.

17. **(Currently Amended)** A computer-readable storage medium encoded with processing instructions for presenting a composite web page, including:

computer readable instructions for receiving a user request to present a composite web page, the composite web page defined by analyzing a web page to determine a list of the associated elements, presenting the list to a user, and receiving a user selection of one or more associated elements from the list;

computer readable instructions for identifying at least one element of the composite web page;

computer readable instructions for retrieving the at least one element; and

computer readable instructions for rendering the at least one element to form the composite web page.

18. **(New)** The method of claim 1, wherein analyzing the web page includes parsing HTML source code of the web page.

19. **(New)** The method of claim 1, wherein presenting the list to the user includes providing a view of the relationships between the associated elements in the form of a tree structure.

20. **(New)** The method of claim 9, wherein analyzing the web page includes parsing HTML source code of the web page.
